CREDIT CARD PORTFOLIO & CUSTOMER ANALYTICS REPORT

Author: Akshita Sah

$56.5M YTD REVENUE	**93%** BLUE + SILVER SHARE OF TRANSACTIONS	**68%+** TX / NY / CA SHARE OF TXN VALUE
57.5% 30-DAY ACTIVATION	**6.06%** DELINQUENCY RATE	**+28.8%** WEEK 53 WoW REVENUE

1. PROJECT OVERVIEW

This dashboard was built to give stakeholders a clear, weekly view of credit card performance, revenue streams, and customer risk factors. Instead of static reporting, I designed it to dynamically track week-over-week changes so the business can spot spending spikes or drops immediately.

2. KEY FINANCIAL & PORTFOLIO FINDINGS (YTD)

- **Total Revenue:** The portfolio generated $56.5 million in total YTD revenue ($45.5M in transactions, $8M in interest, and the rest from annual fees).
- **Card Tier Dominance:** Entry and mid-tier cards (Blue and Silver) account for 93% of all customer transactions, proving they are the core profit drivers.
- **Geographic Concentration:** Over 68% of total transaction value comes from just three states: Texas, New York, and California.

3. RISK & CUSTOMER ENGAGEMENT

- **Onboarding Success:** The 30-day card activation rate sits at a healthy 57.5%, showing strong initial customer engagement after card delivery.
- **Credit Risk:** The overall delinquency (default) rate is 6.06%, with defaults leaning slightly higher among self-employed user groups—highlighting a segment where the bank should apply stricter credit limits.

4. RECENT WEEKLY MOMENTUM (WEEK 53)

Closing out the year in Week 53, the portfolio saw a sharp 28.8% week-over-week revenue jump, driven by seasonal holiday spending across active cardholders.
